👤 PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience building and maintaining web applications using React.js, Next.js, JavaScript, TypeScript, and .NET. Currently working in the airline domain, developing solutions for passenger management, booking, baggage operations, WebDCS, and PNRGOV. Experienced in frontend development, API integration, EDIFACT processing, and performance optimization. I enjoy solving real-world problems, working with teams, and building reliable applications that meet business needs.

👜 PROFESSIONAL EXPERIENCE

Software Engineer,

03/2023 – Present | Gurgaon

SpiceJet (including SpiceTech – subsidiary)

- Developed and maintained full-stack airline applications using React.js and .NET.
- Worked on airline systems covering booking management, passenger handling, baggage tracking, and notifications.
- Reduced manual booking errors by approx. 30% through validation workflows and automation.
- Improved application performance and load time by ~25% through API and UI optimization.
- Handled end-to-end development, from understanding requirements to implementation, testing, and deployment
- Debugged and resolved production issues using Chrome DevTools and Postman
- Worked closely with different teams to understand requirements and build practical, reliable solutions

🎓 EDUCATION

B.Tech (CSE), RPS Group of Institutions

2018 – 2022

🧠 TECHNICAL SKILLS

Frontend

- React.js, Next.js, JS (ES6+), TypeScript, Redux, Toolkit
- Android, XML, HTML5, CSS3, Tailwind CSS, Bootstrap

Backend

NET, ASP.NET Core (Web API), REST APIs, Java

Tools

- Git, GitHub, VS Code, Visual Studio
- REST APIs, JSON

Other Skills

- Responsive Design, Cross-Browser Compatibility
- Performance Optimization, Component-Based Architecture

KEY PROJECTS

Group Reservation System (Live)

- Developed a system enabling agents to create booking requests and airlines to review and approve them
- Implemented fare management, policy application, and cancellation workflows
- Built frontend using React.js and integrated backend using .NET Web APIs
- Designed backend logic for validation, pricing, and approval process
- Improved operational efficiency and reduced manual communication

Airline Baggage Tracker

- Developed system to manage baggage complaints (missing, excess, damaged, pilferage)
- Built React.js UI for complaint tracking and status updates
- Implemented backend services in .NET for workflow handling
- Enabled end-to-end complaint tracking and resolution system

Flight Routes Visualization (Live)

- Created interactive map using React.js & Leaflet.js. Optimized rendering and animations for smooth performance. Improved user interaction with dynamic route visualization.

Elite Passenger Management System (Live)

- Built functionality to manage elite/ VVIP passengers and automate SSR tagging during booking
- Implemented logic to auto-assign VVIP SSR codes, reducing manual effort
- Developed responsive UI and integrated real-time APIs
- Improved accuracy and efficiency in passenger handling workflows

Cancelled Flight Info (Live)

- Developed system to process cancelled flight data via Excel uploads
- Automated website updates and real-time data reflection
- Integrated Email and SMS notifications for affected passengers
- Reduced manual effort and improved communication efficiency

WEBDCS (Live)

- Developed and enhanced WebDCS (Web Departure Control System) frontend using React.js.
- Designed and implemented airline boarding pass and baggage tag interfaces optimized for thermal and industry-standard printers.
- Researched and implemented Android-based printing workflows for airport operational devices and printers.
- Integrated REST APIs and managed real-time passenger, baggage, and flight operation data.
- Created responsive and user-friendly operational screens for check-in and departure management processes.
- Collaborated with backend teams to ensure seamless data flow and printer compatibility across multiple devices.

PNRGOV

- Developed and maintained PNRGOV, a full-stack airline operations application using React.js and .NET.
- Designed and implemented EDIFACT text file generation workflows, including file structure creation, data mapping, validation, and automated export processes.
- Collaborated with business teams to analyze EDIFACT message requirements and convert operational data into standardized airline industry formats.
- Built end-to-end features covering UI development, API integration, database operations, and file-processing modules.
